

Fossil Collective - Wolves

```
Tom: G
                                                               Light a fire when you see them all arrive
  Em
                                                               Everybody gather around
There's a false alarm
All the lights went down for miles around
                                                                Every hour we're losing time
And they taught us a lie, taught us how to survive
                                                                Every hour we're losing time
All we are is what we were told
                                                               Turn around
CHORUS:
                                                               Em D Am Am
Em D Am C
The wolves are coming out
Light a fire when you see them all arrive
                  D
                                                               CHORUS:
Everybody gather around, form a line
                                                                The wolves are coming out
                                                               Light a fire when you see them all arrive Am D
In the truth of a lie, there's a calm in your eyes, a call to Everybody gather around
As we lay on our sides, looking up to the sky,
                                                               Every hour we're losing time
                                                                                G
                                                                Every hour we're losing time
All around they were closing in
                                                               Bm Em Am
                                                                               x3
The wolves are coming out
```
