Nick Lowe - Hope For Us All

Tom: C

```
                        F
Am
People are remarking on the change that's come over me
F                                            Bb
It can be explained very easily

Out of the blue, someone's come into my lonely world
                                          Am
And now i'm walking tall
          Bb              F
And if even i can find someone
              Gm              F
There's hope for us all

F
Dm
I had a reputation as a stay at home so and so
                    F
Cause when my friends would call me up

And say, "let's hit a club"
                       Bb
I'd tell them no, no, no, no

I must admit there were times
                                          Am
When all i ever did was climb the walls
          Bb              F
But if even i can find someone
          Gm              F
There's hope for us all

     Bb               F
If even i can find someone
          Gm              F
There's hope for us all
```

```
Bb
Even in my darkest hour
Am                                      Dm
There was still a light somewhere
Bb
Letting me know by its glow
                        F
That i'd find comfort there

Bb
I walked a lonely street
Am                      Dm
Waiting for love to come
          Gm              F
And if even i can find someone
                    Bb          F
There's hope for us all

                                    Dm
Dada dada dadada
F                              Bb
Dada dada dadada

I must admit there were times
                                              Am
When all i ever did was climb the walls
              Bb          F
But if even i, a feckless man
              Bb                            F
Who's thrown away every single chance he's ever had
              Bb                  F
Can find someone to check his fall
              Bb                      F
There must be hope for us all
          Bb              F
If even i can find someone
              Gm              F
There's hope for us all
```
