

Noel Gallagher - The Man Who Built The Moon

```
Tom: Ab
                                                               No one said a word of course
 (com acordes na forma de G )
                                                               I believe he was wearing on his sleeve
Capostraste na 1ª casa
Intro: Em G D Am Em
                                                               A heart made of black and stone
                                                               I said, my love
She was there
Diamonds in her hair
                                                               I think Iâ□□ve had enough
Singing out a dead man'□□s song
                                                               I'm gonna find my way back home
Here am I
                                                                   We never should've left town in the first place
With the mighty and the high
                                                                                Am
                                                                   Now we gotta walk like they talk in the rat race
Feeling like I don'□□t belong
                                                                    You keep your eyes on the prize if you want it all
There's you in your book of who's who
Acting like you just don't care
                                                               You and I
We were lying low
                                                               The spider and the fly
                                                               Will meet where the shadows fall
Got nowhere to go
And any road will get us there
                                                               (Em G D Am Em)
    We never should've left town in the first place
                                                                    We never should've left town in the first place
                  Am
                                                                                 Αm
    Now we gotta walk like they talk in the rat race
                                                                   Now we gotta walk like they talk in the rat race
    You keep your eyes on the prize if you want it all
                                                                    You keep your eyes on the prize if you want it all
You and I
                                                               You and I
The spider and the fly
                                                               The spider and the fly
Will meet where the shadows fall
                                                               Will meet where the shadows fall
Make room for the man who built the moon
                                                               You and I
                                                               Em
He arrived on a knackered horse
                                                               The spider and the fly
Made no sound from the day he left town
                                                               Will meet where the shadows fall
```
